

Suspension Design and Analysis using SolidWorks

Company:

One of the largest automotive ancillary units, serving all major automobile OEM manufacturers like TATA, Ashok Leyland, Eicher etc in business ranging from Wheels and Air Suspension Systems.

Challenges:

Precise product on time for higher customer satisfaction

Need a complete product development solution which includes design, drafting, simulation and kinematic studies

Adaptability to meet client needs

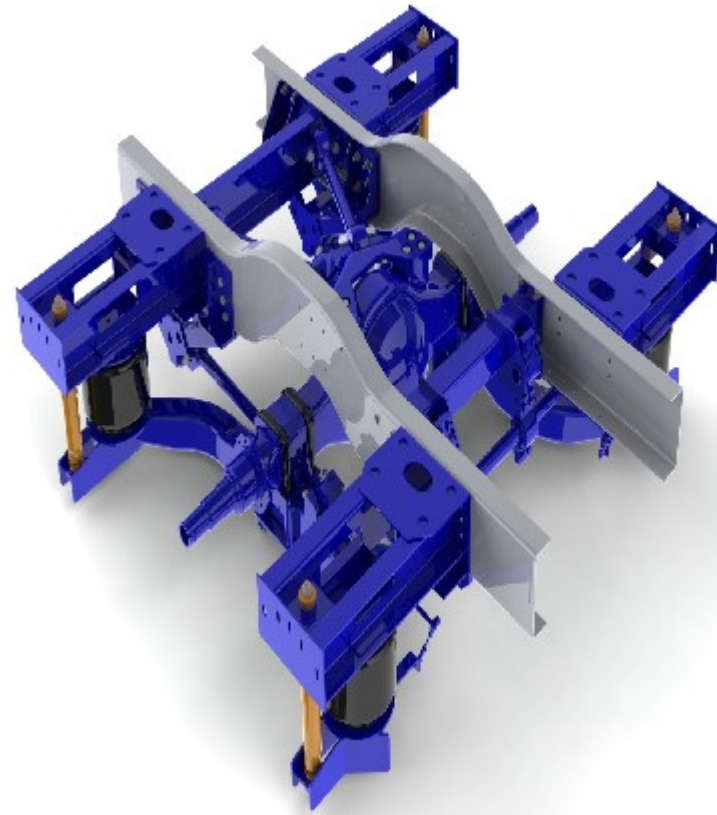

SolidWorks Benefits:

Shortened new product design and development time

User friendly compared with other software's

Lowered product development costs

E-Drawings helped us to interact with clients faster and more interactively in 3D

"SolidWorks Simulation helped us to shorten design development time and cut prototype costs."
